EXPERIENCE

Distributed Systems Security Researcher (Co-op)

Jan – June 2025

Khoury Network and Distributed Systems Security Lab

Boston, MA

- **First-authored peer-reviewed paper on multi-agent security accepted at NDSS 2026 (top-4 cybersecurity venue); 31 citations since publication**
- Designed ACE, a multi-agent security framework defending against indirect prompt injection via information flow control, context sandboxing, and output validation across LangChain agent pipelines
- Red teamed production multi-agent systems with prompt injection, context poisoning, and denial-of-service attacks to expose trust boundary violations

R&D Systems Engineer (Internship)

June 2026 – Aug 2026

Keysight Technologies

Calabasas, CA

- Prototyping AI-powered anomaly classification pipeline for a network security emulation platform on L4–L7 topologies
- Automating system test assessment and regression testing pipelines across diverse network configurations
- Configuring and emulating real customer environments using firewalls, proxies, and load balancers in Linux-based R&D infrastructure
- Debugging microservices and Kubernetes deployments across distributed test infrastructure

Agentic Software Engineer (Co-op)

Jan 2026 – Present

Vestmark

Cambridge, MA

- Building and shipping full-stack features across Ruby on Rails, React, and LLM orchestration layers for an AI-powered Investment Advisor Agent serving financial advisors
- Reduced LLM agent response latency 3x by parallelizing tool call execution across concurrent API requests
- Implemented memory storage, context retrieval, observability (OpenTelemetry/Grafana), and output validation for agentic pipelines using TypeScript and Mastra
- Designed and shipped a proactive agentic workflow ingesting RSS market news and surfacing tenant-relevant updates based on semantic preferences and market relevance

NLP Engineering Intern (Internship)

July – Sept 2024

Matrix Origin

San Francisco, CA

- Built evaluation infrastructure for NL-to-SQL system; benchmarked Llama across hundreds of edge-case prompts
- Improved query accuracy 40% via systematic prompt engineering and few-shot example construction

PROJECTS

Andal: Embedded Event Store

C / Python

- Built a full database engine from scratch in C with columnar storage, write-ahead log, crash recovery, and inverted indices
- Designed for embedded analytics: immutable append-only segments, lazy loading, and a Python C API — positioned as a lightweight SQLite-for-events

EDUCATION

B.S. Computer Science (Systems Engineering Concentration)

Sept 2023 – May 2027

Northeastern University

Boston, MA

GPA: 3.84

Coursework: Distributed Systems (*Graduate*), Computer Systems, Cybersecurity, Networking, Databases, Data Structures and Algorithms, Object-Oriented Design, Robotics, Data Science, Theory of Computation

SKILLS

Languages: Python, C, Rust, C++, TypeScript, JavaScript, SQL, Bash, Ruby, Java

AI/ML: LangChain, LLM Evaluation, Agent Orchestration, Prompt Engineering, Mastra, Scikit-Learn, Anomaly Detection

AI Security: Prompt Injection Defense, Multi-Agent Threat Modeling, Context Sandboxing, Information Flow Control

Infrastructure: Docker, Kubernetes, Linux, AWS, PostgreSQL, MongoDB, Redis, OpenTelemetry, CI/CD

Frameworks/Libraries: React, FastAPI, Ruby on Rails, Django, Express, Pandas, NumPy, TailwindCSS

Systems: Distributed Systems, Memory Management, Operating Systems, Databases, Networks
